GROWTH READINESS

58 GRADE F

Deterministic baseline from externally visible evidence. This should be treated as a practical starting score, not private analytics.

EVIDENCE SCOPE

8 pages sampled · 0 pages with JSON-LD · 0 FAQ-signal pages · 0 social/profile links.

Executive Visibility Diagnosis

This report is an outside-in visibility diagnosis for OconEco: how the business can be understood by potential customers, search engines, local discovery platforms, and AI answer systems using only public evidence. OconEco shows its strongest public signals in Visibility and Trust & Proof, but the clearest growth leaks are in Social / Public Profiles and AI SEO Readiness. No JSON-LD structured data was detected on sampled pages. No official social/profile links were detected from the sampled website evidence. That matters because people and AI systems both favor businesses with clear entity facts, specific service answers, visible proof, consistent profiles, and obvious next steps. When those signals are scattered, thin, or hard to parse, the business can still look legitimate to a human visitor but be missed, summarized weakly, or passed over when an AI/search experience decides which companies to surface. The practical opportunity is to turn the findings below into a clearer proof graph and buyer journey: stronger structured facts, better question-answer content, more visible trust proof, cleaner public profiles, and conversion steps that make the next action obvious.

BIGGEST GROWTH CONSTRAINT

The biggest constraint is public-entity connection: official profiles and proof need to be connected so the business looks consistent across public surfaces.

BEST FIRST MOVE

Start by tightening the inquiry path: dedicated contact/booking flow, clear CTA copy, proof near the decision point, and tracking on form/call actions.

Strongest public signals

- **Visibility:** 72 / C- — No clearly classified service/pricing pages were found in the sampled crawl.
- **Trust & Proof:** 68 / D+ — No social/profile links were detected from sampled pages.
- **Technical / Domain Health:** 62 / D- — SPF was not detected.

Critical growth leaks

- **Social / Public Profiles:** 42 / F — No public social/profile links were detected from the sampled website evidence.
- **AI SEO Readiness:** 44 / F — No Organization/LocalBusiness/Service/Person schema was detected in sampled JSON-LD.
- **Brand Consistency:** 44 / F — No official social/profile links were detected from the sampled site or schema.

Evidence-Based SWOT

This SWOT summarizes the strategic visibility position using public website evidence, crawl findings, and report scores. It highlights what the business appears to do well, where public-facing gaps exist, and where deeper competitive research could add more context.

Scope note: SWOT combines the business website analysis with public website evidence from provided competitor URLs. Ranking, traffic, backlink, and search-volume context can be added with a dedicated SEO platform.

Strengths

- Metadata foundation: all 8 sampled pages have titles.
- Search-result foundation: all 8 sampled pages have meta descriptions.
- Overall visibility readiness: stronger than the competitor sample.
- AI SEO readiness: stronger than the competitor sample.
- Conversion clarity: stronger than the competitor sample.

Weaknesses

- Trust proof gap: no review/testimonial proof signals were detected on sampled pages.
- Conversion clarity is still developing: conversion score is 61.
- AI SEO gaps: 9 page-level AI-readiness issue(s) were detected.

Opportunities

- Add 3–6 FAQs to priority service/home pages covering fit, cost, process, timing, safety/risk, and next step.
- Add testimonial/review/proof blocks near homepage and service-page CTAs.
- Add Service, FAQPage, BreadcrumbList, Organization/LocalBusiness, and sameAs schema where accurate.
- Add a concise entity/service summary block on the homepage and service pages.
- Add comparison-safe content that explains fit, differentiators, risks, and decision criteria.

Threats

- A competitor with stronger visible reviews/testimonials may feel safer to buyers and easier for AI/search systems to support.
- Competitors with clearer service and FAQ schema may provide more machine-readable evidence.
- If visibility improves without conversion tracking, the business may struggle to prove which fixes produced qualified inquiries.

Module Scorecard

Top 5 Priority Fixes

These are the few fixes most likely to improve visibility, trust, conversion, or measurement. Each one includes an acceptance criterion so the recommendation can become real work instead of vague advice.

P1Impact: High

Effort: Medium

Add business entity structured data

Help Google and AI systems understand the official business entity, services, location/service area, and public profile graph.

What to change: Add JSON-LD to the homepage using Organization or LocalBusiness, whichever accurately matches the business. Include name, URL, logo, description, areaServed/location, contactPoint, and sameAs links to official profiles. Add Service schema for primary services/offers when service pages exist.

Acceptance criteria: Validated JSON-LD is present, matches visible page content, and includes official entity/profile facts without exposing private data.

P1Impact: High

Effort: Medium

Create buyer-question FAQ content

Answer the questions buyers and AI systems need before recommending or contacting the business.

What to change: List the 12–20 questions prospects ask before buying, applying, booking, or requesting a quote. Group questions by cost, timing, fit, process, proof, location, and what happens next. Write concise direct answers in plain language, avoiding filler.

Acceptance criteria: At least 8 high-intent questions are answered visibly, with direct answers suitable for buyers and AI answer extraction.

P2Impact: Medium

Effort: Medium

Connect official public profiles

Create a consistent public profile graph so customers, Google, and AI systems can verify the official brand presence.

What to change: Identify the official Facebook, Instagram, LinkedIn, YouTube, TikTok, Google Business Profile, and relevant directory profiles. Remove, merge, or clearly de-emphasize duplicate/stale profiles where possible. Update each profile bio with consistent business name, website URL, location/service area, and primary CTA.

Acceptance criteria: Official profiles are linked from the website and schema, with consistent naming, URLs, bios, and brand presentation.

P1Impact: High

Effort: Medium

Add visible trust proof near conversion points

Reduce buyer hesitation by placing proof where visitors make the decision to contact, book, apply, or request a quote.

What to change: Collect 3–6 strong review/testimonial snippets that mention outcomes, service quality, speed, team, or trust. Add a proof block near the primary CTA on the homepage. Add service-specific proof on key service/offer pages when possible.

Acceptance criteria: At least one proof block appears before or near the primary CTA and supports the business’s main claims.

P1Impact: High

Effort: Medium

Clarify the conversion path

Make the next step obvious, reassuring, and trackable.

What to change: Create or improve a dedicated contact, booking, application, or quote page. Use a specific CTA such as “Request an estimate,” “Apply for membership,” or “Book a consult,” not only “Submit.” Explain what happens after the form is submitted and how quickly the business responds.

Acceptance criteria: The primary next step is visible, specific, reassuring, and measurable from key pages.

SEO Evidence & Remediation Plan

This section turns website evidence into implementation-ready SEO, buyer-clarity, and AI citation-readiness fixes. For deeper keyword, backlink, ranking, and competitive intelligence, a dedicated SEO platform such as SEMrush, Ahrefs, Moz, or a similar robust tool can extend this analysis with additional data points.

PAGES ANALYZED

8

8 high-priority page(s) need attention.

METADATA ISSUES

13

Title, meta, duplicate, or heading problems found in sampled pages.

AI SEO ISSUES

9

Schema, FAQ, or direct-answer gaps affecting machine readability.

BUYER ISSUES

6

Proof, CTA, or buyer-friction gaps found from public page evidence.

Scope note: SEO remediation from crawlable website evidence. Search volume, backlinks, rankings, and live Google Business Profile metrics can be explored further with dedicated SEO platforms and connected data sources.

Top SEO growth leaks

High

Add direct-answer FAQ content to high-value pages

Evidence: 6 sampled high-value page(s) lacked FAQ/direct-answer signals.

Why it matters: Improves buyer clarity and AI citation-readiness by answering common objections in extractable language.

Fix: Add 3–6 FAQs to priority service/home pages covering fit, cost, process, timing, safety/risk, and next step.

Acceptance criteria: Priority pages visibly answer buyer questions and FAQ schema is added only where matching FAQ content is visible.

High

Move trust proof into the conversion path

Evidence: 0 sampled pages showed review/testimonial proof signals.

Why it matters: Buyers and AI/search systems have less public proof to support trust and recommendation decisions.

Fix: Add testimonial/review/proof blocks near homepage and service-page CTAs.

Acceptance criteria: At least one high-intent page includes specific proof before or near the primary CTA.

High

Expand schema beyond the base entity

Evidence: Detected schema types: none.

Why it matters: Search and AI systems need explicit service, FAQ, breadcrumb, and entity relationship data.

Fix: Add Service, FAQPage, BreadcrumbList, Organization/LocalBusiness, and sameAs schema where accurate.

Acceptance criteria: Schema validates and matches visible page content without unsupported claims.

Page-level opportunity table

PAGE	ROLE	MAIN ISSUE	SUGGESTED FIRST FIX	PRIORITY
https://oconeco.webnode.page/	home	Title is short or underspecified · Meta description may be too long · Missing H1	Expand the title so it clearly states the page topic and buyer intent.	High
https://oconeco.webnode.page/about-us/	about / authority	Title is short or underspecified · Meta description may be too long · Missing H1	Expand the title so it clearly states the page topic and buyer intent.	High
https://oconeco.webnode.page/contact/	conversion	Title is short or underspecified · Meta description is thin · Missing H1	Expand the title so it clearly states the page topic and buyer intent.	High

Buyer & AI Content Gap Map

This matrix shows which decision-making questions were visible in the sampled website evidence. It helps identify content that can improve buyer confidence, SEO relevance, and AI citation-readiness.

Scope note: Content gaps are based on sampled/crawlable pages only; they do not prove the business lacks the information elsewhere.

BUYER / AI QUESTION	FOUND?	EVIDENCE	RECOMMENDED CONTENT
What does this business do and who is it for?	Weak	0 pages with structured data	Add a concise entity/service summary block on the homepage and service pages.
What does it cost or what affects cost?	Detected	1 page(s) with pricing/cost signals	Add pricing ranges, starting points, or "what affects cost" guidance where appropriate.
What happens after I contact or book?	Detected	Process snippets from sampled page text	Add a clear next-step/process block before forms and booking CTAs.
Why should I trust this provider?	Detected	0 review-proof pages · 2 portfolio/result pages	Add testimonials, proof, credentials, outcomes, case examples, or review snippets near CTAs.
Where does the business serve?	Partial / detected	2 public/profile links detected	Add service-area copy and LocalBusiness/areaServed schema where accurate.
Who is behind the business?	Detected	About/team/provider signals found in sampled URLs/text	Strengthen provider, team, credentials, and authority content.
How does this compare to alternatives?	Weak / missing	0 FAQ/direct-answer page(s)	Add comparison-safe content that explains fit, differentiators, risks, and decision criteria.

Competitor Website Comparison

This compares the business against provided competitor URLs using the same public website evidence: content depth, schema, FAQ coverage, trust signals, conversion clarity, and profile/entity signals. It is not a ranking or traffic report; dedicated SEO platforms can add keyword, backlink, traffic, and SERP data if a deeper competitive study is needed.

Competitors reviewed: null

CATEGORY	BUSINESS	STRONGEST COMPETITOR SAMPLE	ADVANTAGE
Overall visibility readiness	58	null: 38	Business
AI SEO readiness	44	null: 39	Business
Conversion clarity	61	null: 24	Business
Trust signals	68	null: 54	Business
Content depth	504	null: 0	Business
FAQ/direct-answer coverage	0	null: 0	Even
Visible proof coverage	2	null: 0	Business
Public/profile graph	2	null: 0	Business

Where this business is stronger or even

- Overall visibility readiness: stronger than the competitor sample.
- AI SEO readiness: stronger than the competitor sample.
- Conversion clarity: stronger than the competitor sample.
- Trust signals: stronger than the competitor sample.
- Content depth: stronger than the competitor sample.

Where competitors show stronger evidence

- No major competitor advantage was detected from the provided sites.

Highest-value moves to close the gap

- Maintain current public evidence and monitor against competitors over time.

Quick Wins Today

These are practical fixes that can usually be started immediately. They are selected because they improve clarity, trust, AI/search understanding, or measurement without requiring a full rebuild.

FIX	WHY IT MATTERS	TIME	IMPACT	OWNER
Add Organization/LocalBusiness schema to the homepage	Gives Google and AI systems explicit facts about the business, services, location, and official profiles.	1–2 hrs	High	Developer/SEO
Add a short FAQ block answering buyer questions	Direct answers help skeptical buyers and create AI/search-friendly content.	1–2 hrs	High	Marketing/content
Add official social/profile links to the footer and schema sameAs	Connects the public brand graph so buyers and AI systems can verify official profiles.	20–45 min	Medium	Website/marketing
Place 3–6 real testimonials or review snippets near the primary CTA	Proof near the decision point reduces hesitation and makes claims more believable.	45–90 min	High	Marketing/website
Fix missing email authentication records	SPF/DMARC/DKIM improve deliverability and reduce spoofing risk before automated follow-up.	30–90 min	Medium	IT/DNS

30 / 60 / 90 Day Fix Plan

This turns the analysis into a phased implementation path: fix foundations first, build proof and content next, then monitor and scale growth.

0–30 Days: Foundation

- Fix entity basics: schema, official profile links, core service/category/location facts, and contact path clarity.
- Add proof near conversion points: testimonials, review snippets, process reassurance, and clear next-step copy.
- Verify measurement: GA4/GTM, form-submit events, click-to-call, and booked-call/conversion tracking.
- AI SEO: Build an entity and schema foundation.
- Content: Create buyer-question and objection pages.
- Public Profiles: Create a consistent public profile graph.

31–60 Days: Proof & Content

- Build content assets around buyer questions: FAQ, pricing/estimate guidance, process/timeline, service-fit, and comparison questions.
- Create proof assets: case study template, recent work/examples, team/founder authority block, and review-to-social content.

61–90 Days: Growth & Monitoring

- Add public-presence monitoring: Google reviews, local pack visibility, AI prompt appearances, and competitor proof gaps.
- Use the evidence to prioritize growth campaigns: local SEO pages, review generation, social proof cadence, and high-intent ads if appropriate.
- Regenerate the analysis after fixes to measure score movement and identify the next set of constraints.

Owned Public Footprint

This section summarizes facts gathered from the business website, structured data, visible proof, and public/profile links the website itself exposes. It shows the public entity signals currently available to customers, search engines, and AI systems.

Brand Consistency & Public Profile Alignment

This checks whether the business presents a consistent public identity across the website and the social media/public profile pages linked from it: name, profile links, service/category language, and visual palette. Consistency helps buyers trust they are looking at the same company and helps search/AI systems connect public evidence into one clear entity.

PROFILES CHECKED

2

2 profiles were publicly accessible enough to review.

NAME ALIGNMENT*

0 of 2 confirmed

Profiles where the public render appears connected to the business name/handle.

WEBSITE LINK-BACK*

0 of 2 confirmed

Profiles where the current website link was visible in the public render.

VISUAL PALETTE*

0 of 2 confirmed

Accessible profiles with strong or partial visual palette alignment.

***How to read these counts:** “0 of 1 confirmed” means one social/public profile was checked, but the public no-login evidence did not confirm that specific alignment signal. It does not necessarily mean the profile is wrong; blocked or limited platforms may need manual review.

Scope note: This checks public rendering from the website and social/public profiles linked from it. Platforms that block public access may require manual review or approved API access.

Website palette sampled

#2a3850

#22314a

#bdc2c9

#2a384f

#2b3951

Social/public profile alignment snapshot

PROFILE	NAME / ENTITY	WEBSITE LINK	SERVICE LANGUAGE	VISUAL CHECK
Google / Maps books	Brand name not clearly confirmed	Website link not confirmed in public render	Category/service language not clearly confirmed	Visual check limited by platform UI/login shell
Google / Maps jdزOKRJw0tkC	Brand name not clearly confirmed	Website link not confirmed in public render	Category/service language not clearly confirmed	Visual check limited by platform UI/login shell

Recommended brand fixes

- Confirm every official public profile links back to the current website or primary conversion path.
- Standardize public profile naming/handles so buyers and AI systems can confidently connect profiles to the same entity.
- Review profile imagery and banners for visual consistency with the website palette/logo system.

Revenue Infrastructure Readiness

Visibility creates opportunity, but revenue depends on what happens after the inquiry. This section looks at whether the business has the follow-up, workflow, and measurement infrastructure needed to capture and scale demand.

Readiness Stage

High-Value System Opportunity

This business may be a fit for a custom revenue infrastructure review: lead routing, internal workflow tools, dashboards, portals, or AI-assisted operations built around the sales and fulfillment process.

Infrastructure Fit Score

93 / 100

Directional score from intake answers plus visible conversion and measurement signals.

Readiness Inputs

4 / 4

Submitted operational signals used to identify follow-up, scheduling, reporting, and workflow constraints.

Scope note: This is a directional fit assessment, not a software proposal. A custom build should only be recommended after confirming lead volume, operational value, budget range, and ROI.

- 4 revenue-infrastructure intake answers provided.
- Submitted answer indicates openness to a larger workflow/system improvement if ROI is clear.

System opportunity map

Area	Signal	Best Next System Move	Priority
Lead Follow-Up	Manual follow-up by owner/team	Speed-to-lead workflow: route new inquiries, trigger first response, and track owner/team follow-up.	High
Quoting / Proposals	Quoting / proposals	Quote/proposal workflow that standardizes inputs, follow-up, approvals, and reporting.	High
Conversion Path	Conversion score 61	Clarify forms, CTAs, proof, and next-step expectations before scaling lead flow.	Medium
Measurement	Measurement score 61	Verify form, call, booked-call, and source tracking so growth can be tied to outcomes.	High
Qualification	No FAQ/buyer-question signal detected	Add qualification and objection-handling content before or inside the intake path.	Medium

Buyer Question Gap Matrix

This connects SEO, AI answer-readiness, trust, and conversion around the questions real buyers need answered before they inquire.

Buyer Question	Current Coverage	Evidence Checked	Recommended Asset
What does this business do?	Partial	Homepage/service copy and schema	Clear entity + service summary block
Who is it for?	Weak / missing	Service/category and FAQ signals	Who-we-help section or segmented paths
Where does it operate?	Partial	Location/service area/profile evidence	Location/service-area block + LocalBusiness schema
Why should I trust it?	Partial	Testimonials, proof, case examples, team/process signals	Trust proof stack near CTAs
What does it cost or what affects price?	Partial	Pricing/cost/estimate language	Cost/expectation FAQ or estimate guidance
What happens after I contact them?	Weak / missing	CTA, process, and risk-reversal evidence	Next-step/process block before forms
How is it different from alternatives?	Weak / missing	Proof, positioning, case studies, comparison-safe claims	Differentiator + proof-backed comparison content

Trust Proof Stack

A strong proof stack helps skeptical buyers feel safe taking the next step and gives search/AI systems better evidence to understand why the business is credible.

Proof Signal	Status	Recommended Next Step
Testimonials / review proof	Weak / missing	Add specific review snippets near key CTAs and service pages.
Case studies / work examples	Detected	Publish 2–3 concrete examples showing context, outcome, and proof.
Team / founder / authority proof	Detected	Add about/team/founder authority details and credentials where relevant.
Process / what happens next	Detected	Explain the inquiry, onboarding, booking, or service process before the form.
Local/entity proof	Detected	Connect Google/profile links, service area, NAP, and schema into a consistent graph.
Risk reversal / reassurance	Weak / missing	Add privacy, guarantee, no-obligation, security, or expectation-setting copy where accurate.

Deeper SEO Intelligence Options

This analysis is designed to surface high-level visibility, trust, conversion, and AI-readiness opportunities from public website evidence. If the business wants to go further, a dedicated SEO platform such as SEMrush, Ahrefs, Moz, or a similar robust system can add deeper keyword, ranking, backlink, local-pack, competitor, and trend data.

EXPANSION AREA	WHAT THIS ANALYSIS COVERS	WHAT A ROBUST SEO/DATA PLATFORM CAN ADD
Google Business Profile / Local SEO Snapshot	This analysis can identify Google/Maps profile links and local entity signals exposed by the website.	A dedicated SEO/local platform or connected GBP data can add verified rating, review count, categories, hours, local pack position, and profile completeness.
Live Review / Reputation Intelligence	This analysis identifies testimonials, review widgets, review links, and proof language visible on the website.	A robust reputation or SEO platform can add live rating/review count, recency, owner responses, review themes, and competitor review gaps.
Local / Search Competitor Snapshot	This can compare public website evidence when competitor URLs are provided.	A dedicated SEO platform can add SERP/local-pack data, automated competitor discovery, keyword overlap, and ranking context.

AI Answer Readiness

QUESTION	READINESS	SUMMARY	WEAK/MISSING FACTS
What does this business do?	Partial	Public evidence partially supports this: Visible entity/location/team language was found on a sampled page.	Sampled structured data is missing several high-value business/schema types.; No FAQ/direct-answer signals were detected on sampled pages.; Add explicit service/category facts in visible copy and structured data.
Who is it for?	Partial	Public evidence partially supports this: Visible CTA/next-step language was found on a sampled page.	No phone number was detected on the sampled contact page.; Clarify ideal customer segments and intent-specific paths.
Where does it operate?	Partial	Public evidence partially supports this: Visible entity/location/team language was found on a sampled page.	No public social/profile links were detected from sampled website pages.; Expose location/service-area facts in copy, profiles, and LocalBusiness schema.
Why choose it over alternatives?	Partial	Public evidence partially supports this: Visible process/timeline language was found on a sampled page.	No review/testimonial/proof language signals were detected on sampled pages.; Add specific proof, differentiators, outcomes, process, and objection-handling near CTAs.
What public proof supports that?	Partial	Public evidence partially supports this: Visible process/timeline language was found on a sampled page.	No review/testimonial/proof language signals were detected on sampled pages.; No public social/profile links were detected from sampled website pages.; Connect reviews, testimonials, case studies, portfolio/work-result examples, social/profile links, and schema into a visible proof graph.
How would it compare with alternatives?	Partial	Public evidence partially supports this: Visible entity/location/team language was found on a sampled page.	Add comparison-safe differentiators, category positioning, and evidence a third-party/AI answer can cite.
What does it cost and what is the next step?	Partial	Public evidence partially supports this: Visible CTA/next-step language was found on a sampled page.	No phone number was detected on the sampled contact page.; Clarify pricing/estimate expectations, primary CTA, and what happens after inquiry.
Does the business appear active and current?	Unclear	Not safely answerable from the current public evidence ledger.	Surface recent work, current profile activity, updated proof, and dated trust signals.

What We Would Build From This

These implementation assets turn the analysis into follow-up work a team can scope, assign, and verify.

FINDING	IMPLEMENTATION ASSET	SUCCESS LOOKS LIKE
Add business entity structured data	Schema/entity implementation pack	Validated JSON-LD is present, matches visible page content, and includes official entity/profile facts without exposing private data.
Create buyer-question FAQ content	Buyer-question FAQ pack	At least 8 high-intent questions are answered visibly, with direct answers suitable for buyers and AI answer extraction.
Connect official public profiles	Implementation checklist	Official profiles are linked from the website and schema, with consistent naming, URLs, bios, and brand presentation.
Add visible trust proof near conversion points	CTA + contact-path rewrite	At least one proof block appears before or near the primary CTA and supports the business's main claims.
Clarify the conversion path	CTA + contact-path rewrite	The primary next step is visible, specific, reassuring, and measurable from key pages.
Add direct-answer FAQ content to high-value pages	SEO remediation implementation ticket	Priority pages visibly answer buyer questions and FAQ schema is added only where matching FAQ content is visible.
Move trust proof into the conversion path	SEO remediation implementation ticket	At least one high-intent page includes specific proof before or near the primary CTA.
Expand schema beyond the base entity	SEO remediation implementation ticket	Schema validates and matches visible page content without unsupported claims.

Evidence Appendix

This appendix shows the public evidence behind major findings. It is intentionally secondary to the action plan.

Area	Claim Supported	Confidence
SEO	All sampled pages have HTML titles.	High
SEO	All sampled pages have meta descriptions.	High
AI SEO	Sampled structured data is missing several high-value business/schema types.	High
AI SEO	No FAQ/direct-answer signals were detected on sampled pages.	High
Trust	No review/testimonial/proof language signals were detected on sampled pages.	High
Trust	Some sampled pages contain portfolio/case-study/work-result signals.	Medium
Social	No public social/profile links were detected from sampled website pages.	High
Technical	SPF email authentication was not detected.	High
Technical	DMARC email authentication was not detected.	High
Technical	HTTPS certificate was detected for the domain.	High

Implementation Brief: Hand This to the Fix Team

These tickets translate the analysis into concrete work. A developer, SEO specialist, marketer, or operations owner should be able to use this as a starting implementation backlog.

Ticket 1

P1

Owner: Developer / SEO

Add business entity structured data

Objective: Help Google and AI systems understand the official business entity, services, location/service area, and public profile graph.

Steps:

1. Add JSON-LD to the homepage using Organization or LocalBusiness, whichever accurately matches the business.

2. Include name, URL, logo, description, areaServed/location, contactPoint, and sameAs links to official profiles.

3. Add Service schema for primary services/offers when service pages exist.

4. Add FAQPage schema only for FAQ content that is visibly present on the page.

5. Validate with Google Rich Results Test or Schema Markup Validator.

Acceptance criteria: Validated JSON-LD is present, matches visible page content, and includes official entity/profile facts without exposing private data.

Evidence behind this ticket: No JSON-LD structured data was detected on sampled pages.

Ticket 2

P1

Owner: Content / SEO

Create buyer-question FAQ content

Objective: Answer the questions buyers and AI systems need before recommending or contacting the business.

Steps:

1. List the 12–20 questions prospects ask before buying, applying, booking, or requesting a quote.

2. Group questions by cost, timing, fit, process, proof, location, and what happens next.

3. Write concise direct answers in plain language, avoiding filler.

4. Place a short FAQ block on the homepage or primary service page and a fuller FAQ/resource page if needed.

5. Add FAQ schema only where the exact questions/answers are visible.

Acceptance criteria: At least 8 high-intent questions are answered visibly, with direct answers suitable for buyers and AI answer extraction.

Evidence behind this ticket: No FAQ/direct-answer signals were detected on sampled pages.

Ticket 3

P2

Owner: Marketing / Website

Connect official public profiles

Objective: Create a consistent public profile graph so customers, Google, and AI systems can verify the official brand presence.

Steps:

1. Identify the official Facebook, Instagram, LinkedIn, YouTube, TikTok, Google Business Profile, and relevant directory profiles.

2. Remove, merge, or clearly de-emphasize duplicate/stale profiles where possible.

3. Update each profile bio with consistent business name, website URL, location/service area, and primary CTA.

4. Add official profile links to the website footer/contact/about page.

5. Add sameAs links for those profiles in Organization/LocalBusiness schema.

Acceptance criteria: Official profiles are linked from the website and schema, with consistent naming, URLs, bios, and brand presentation.

Evidence behind this ticket: No social/profile links were detected from sampled pages or schema.

Ticket 4

P1

Owner: Marketing / Website

Add visible trust proof near conversion points

Objective: Reduce buyer hesitation by placing proof where visitors make the decision to contact, book, apply, or request a quote.

Steps:

1. Collect 3–6 strong review/testimonial snippets that mention outcomes, service quality, speed, team, or trust.

2. Add a proof block near the primary CTA on the homepage.

3. Add service-specific proof on key service/offer pages when possible.

4. Include source/context for credibility, such as Google review, client quote, project result, or location.

5. Avoid unverifiable or generic claims like “best” unless backed by evidence.

Acceptance criteria: At least one proof block appears before or near the primary CTA and supports the business’s main claims.

Evidence behind this ticket: No review/testimonial/proof language signals were detected on sampled pages.

Ticket 5

P1

Owner: Website / CRO

Clarify the conversion path

Objective: Make the next step obvious, reassuring, and trackable.

Steps:

1. Create or improve a dedicated contact, booking, application, or quote page.

2. Use a specific CTA such as “Request an estimate,” “Apply for membership,” or “Book a consult,” not only “Submit.”

3. Explain what happens after the form is submitted and how quickly the business responds.

4. Place proof and FAQ answers before the form where possible.

5. Track form submits, CTA clicks, phone clicks, and booked calls/events.

Acceptance criteria: The primary next step is visible, specific, reassuring, and measurable from key pages.

Evidence behind this ticket: Conversion score or contact-path evidence indicates room for improvement.
